## **Jeane M. Dorini Women's Imaging and Diagnostic Suite offers patients:**

SmartCurve™ breast stabilization system, which is clinically proven to deliver a more comfortable mammogram without compromising image quality, workflow or dose. This latest innovation is part of Holy Cross' ongoing commitment to superior breast cancer detection and has the potential to increase screening volume and compliance for the countless women who have reported avoiding regular mammograms due in large part to the fear of discomfort associated with breast compression.

### **3D Mammography(™) Technology**

High incidence of breast cancer in the United States prompted the American College of Obstetricians and Gynecologists (ACOG) to release guidelines recommending screening mammograms every one to two years starting at age 40 and annually beginning at age 50. "The goal is to decrease deaths from breast cancer through early detection."

- **Stereotactic Breast Core Biopsy**
- **Breast MRI**
- **Breast Needle Localization**
- **Galactogram**
- **Ultrasonography**
